

Young Adult Romance Report Data Analysis

Summary

This report presents a detailed analysis of Young Adult Romance books collected from the Crossword website using Selenium Web Scraping. The dataset contains book titles, authors, original prices, selling prices, and discount information.

The objective of this analysis is to understand pricing patterns, discount strategies, and book value trends. Python libraries such as Pandas, Matplotlib, Seaborn, and ReportLab were used for data cleaning, visualization, and automated report generation.

Key Business Questions & Answers

- Total Books Available : 24
- Total Original Price Value : ■13431

Top 10 Most Expensive Books

The chart highlights the top-selling premium books available in the Young Adult Romance category. These books contribute significantly to the overall revenue and represent the highest-valued products in the collection.

Selling Price Distribution

The distribution chart shows how book prices are spread across different price ranges. Most books are concentrated within a specific price segment, indicating a focused pricing strategy.

Profit / Discount Distribution

The profit distribution analysis demonstrates the discount patterns offered on books. A majority of products fall within a moderate discount range, while a few books receive larger promotional discounts.

Conclusion

The analysis reveals that the Young Adult Romance category contains a diverse range of books with varying price points and discount levels. Several premium books contribute significantly to the overall value of the collection, while discounts play an important role in improving customer affordability and purchase decisions.

Business Recommendations

- Focus promotional campaigns on high-discount books to increase sales volume.
- Monitor premium-priced books as they contribute significantly to total revenue.
- Maintain competitive pricing within the most common customer price range.
- Introduce targeted offers on slow-moving books to improve inventory turnover.
- Analyze author popularity to optimize future stock and marketing decisions.
